Why Electra Air

All our Air-conditioning Units supplied and installed are highly efficient and energy saving. This means that the units need less electricity to run and uses the energy in an efficient way, possibly more than most Air-conditioners on the market which translates into faster Cooling & Heating for you. Our Air-conditioning units are designed to reach a minimum of 16⁰ Degrees Celsius and a Maximum of 30⁰ Degrees Celsius. Bringing you comfort in your home / working environment throughout the seasons.

The new patented driving technology, advanced solely by our Air conditioning units, further exploits the Inverter Driving Technology, allowing the unit to operate even with rotational frequency of 1 HZ (very low). This means that the compressor does not stop, even after reaching the desired temperature, which results in further reducing intensive starts- Stops and introducing new standards in comfort and reliability.

Health

Our Air-conditioners come with a range of allergy filters. This makes it ideal for offices in the Industrial Areas, bringing comfort to you home as well.

High density filters prevent dust and pollen from entering the unit. The auto clean feature makes sure that your air-conditioning unit cleans itself every time you switch it off by leaving the fan unit running for a short time to dry off the moisture. This reduces the buildup for bacteria over time, avoiding smells often produced by older air-conditioning models.

Aesthetic Design

Depending on where we install your air-conditioner, you may want to consider its design. Our Air-conditioning units offer beautiful seamless design with a modern touch. You have the option for your Air-conditioning unit to display lights on your unit- with your chosen temperature when on. You could also turn off the led display if it is too bright. This option is available on your remote.

Our sales team and technicians will also help you to plan the design of the Installation, including any electrical and drainage setups best suited for you.

Warranty and Maintenance

Electra-air provides a warranty with every unit we install and maintain. Electra-Air has a strong after-sales department where our friendly staff will periodically remind you when your air-conditioning unit is due for a service. A service costs very little but benefits your air-conditioning unit hugely.

Servicing your unit on a frequent basis allows your unit to operate at its most Optimum temperatures. We recommend you service your Air-Conditioning units as follows

Everyday office & Home use- Every **Three to Four Month**
Frequent use – Every **Two months**

Electra Air supplies and installs not only our Gree Brand but any other Brand our clientele require. We will provide Warranty Certificates with every Air-conditioning unit we sell to you; and ask that we receive the white Carbon copy after the Air-conditioning unit is purchased to keep record of the warranty on the unit.
